Web Scraping com Python Ryan Mitchell, 2019-04-01 Se a programação é mágica, o web scraping certamente é uma forma de magia. Ao escrever um programa automatizado simples, é possível consultar servidores web, requisitar dados e interpretá-los a fim de extrair as informações desejadas. A edição ampliada deste livro prático não só apresenta uma introdução ao web scraping, como também serve de guia completo para coletar quase todos os tipos de dados da web moderna. A Parte I do livro tem como foco o funcionamento do web scraping: como usar Python para requisitar informações de um servidor web, fazer o tratamento básico da resposta do servidor e interagir com os sites de modo automatizado. A Parte II explora uma variedade de ferramentas e aplicações mais específicas, apropriadas a qualquer cenário de web scraping com os quais é provável que você depare. Faça parse de páginas HTML complicadas. Desenvolva crawlers com o framework Scrapy. Aprenda a usar métodos para armazenar os dados coletados. Leia e extraia dados de documentos. Limpe e normalize dados mal formatados. Leia e escreva em idiomas naturais. Rastreie formulários e logins. Faça scraping de JavaScript e rastreie usando APIs. Use e escreva softwares de tradução de imagem para texto. Evite armadilhas para scraping e bloqueadores de bots. Use scrapers para testar seu site.

Data Science from Scratch Joel Grus, 2015-04-14 Data science libraries, frameworks, modules, and toolkits are great for doing data science, but they're also a good way to dive into the discipline without actually understanding data science. In this book, you'll learn how many of the most fundamental data science tools and algorithms work by implementing them from scratch. If you have an aptitude for mathematics and some programming skills, author Joel Grus will help you get comfortable with the math and statistics at the core of data science, and with hacking skills you need to get started as a data scientist. Today's messy glut of data holds answers to questions no one's even thought to ask. This book provides you with the know-how to dig those answers out. Get a crash course in Python Learn the basics of linear algebra, statistics, and probability—and understand how and when they're used in data science Collect, explore, clean, munge, and manipulate data Dive into the fundamentals of machine learning Implement models such as k-nearest Neighbors, Naive Bayes, linear and logistic regression, decision trees, neural networks, and clustering Explore recommender systems, natural language processing, network analysis, MapReduce, and databases

Natural Language Processing for Online Applications Peter Jackson, Isabelle Moulinier, 2007-06-05 This text covers the technologies of document retrieval, information extraction, and text categorization in a way which highlights commonalities in terms of both general principles and practical concerns. It assumes some mathematical background on the part of the reader, but the chapters typically begin with a non-mathematical account of the key issues. Current research topics are covered only to the extent that they are informing current applications; detailed coverage of longer term research and more theoretical treatments should be sought elsewhere. There are many pointers at the ends of the chapters that the reader can follow to explore the literature. However, the book does maintain a strong emphasis on evaluation in every chapter both in terms of methodology and the results of controlled experimentation.

What is Web 2.0 Tim O'Reilly, 2009-09-23 The concept of Web 2.0 began with a conference brainstorming session between O'Reilly and MediaLive International. Dale Dougherty, web pioneer and O'Reilly VP, noted that far from having crashed, the web was more important than ever, with exciting new applications and sites popping up with surprising regularity. What's more, the companies that had survived the collapse seemed to have some things in common. Could it be that the dot-com collapse marked some kind of turning point for the web, such that a call to action such as Web 2.0 might make sense? We agreed that it did, and so the Web 2.0 Conference was born. In the year and a half since, the term Web 2.0 has clearly taken hold, with more than 9.5 million citations in Google. But there's still a huge amount of disagreement about just what Web 2.0 means, with some people decrying it as a meaningless marketing buzzword, and others accepting it as the new conventional wisdom. This article is an attempt to clarify just what we mean by Web 2.0.

The Fast Track to New Skills María Marta Ferreyra, Lelys Dinarte Díaz, Sergio Urzúa, Marina Bassi, 2021-10-15 Higher education in Latin America and the Caribbean (LAC) has expanded dramatically in the new millennium, yet enrollment in short-cycle programs (SCPs) is still relatively low. Shorter and more practical than bachelor's programs, SCPs can form skilled human capital fast. The economic crisis created by the COVID-19 pandemic has accentuated underlying trends, such as automation, the use of electronic platforms, and the need for lifelong learning. Addressing these demands requires the urgent upskilling and reskilling of the population—a task for which SCPs are uniquely suited. The Fast Track to New Skills: Short-Cycle Higher Education Programs in Latin America and the Caribbean explores the labor market outcomes and returns of SCPs, examines their providers, and identifies the practices adopted by the best programs. Relying on unique data that includes a novel survey of SCP directors in five LAC countries, it finds that while SCPs generate, on average, good labor market outcomes, they vary greatly in quality. SCP providers respond quickly and flexibly to local economy needs; and specific practices related to faculty, job search assistance, and interaction with prospective employers are distinctive of the best programs. Drawing on these findings, The Fast Track to New Skills discusses how to create an environment where good programs are offered and students have the interest and means to attend them. It draws attention to a higher education sector that has been typically overlooked, both in research and policy. The Fast Track to New Skills will be of interest to

policy makers, researchers, and the public at large.
